## Exercise 2

First we install windows 10 in the virtual machine
We go to settings> storage and choose the windows virtual optical disk.

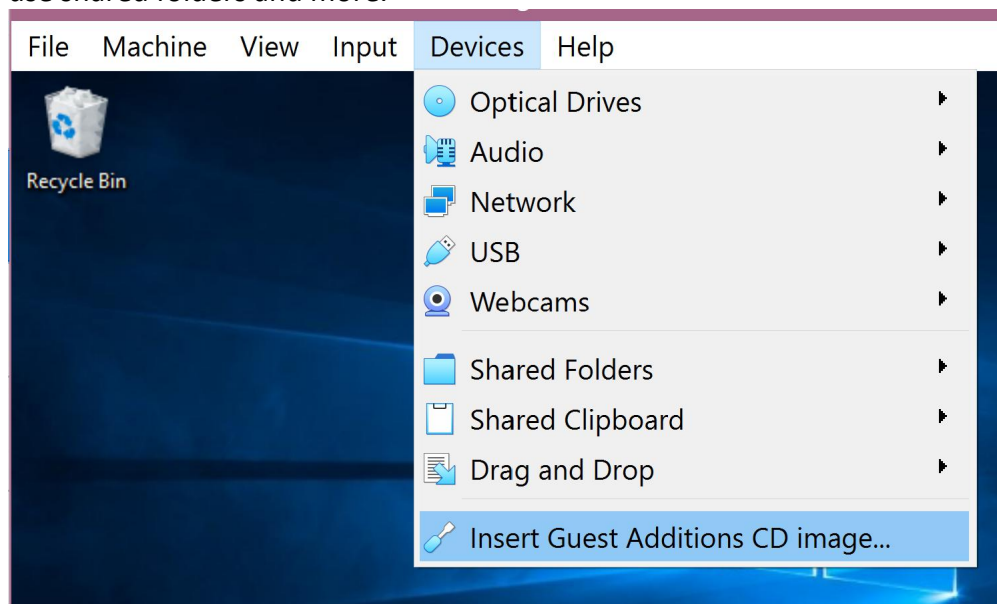

Next to ensure the network connection we need to go settings> networkand choose bridged adapter on the menu.

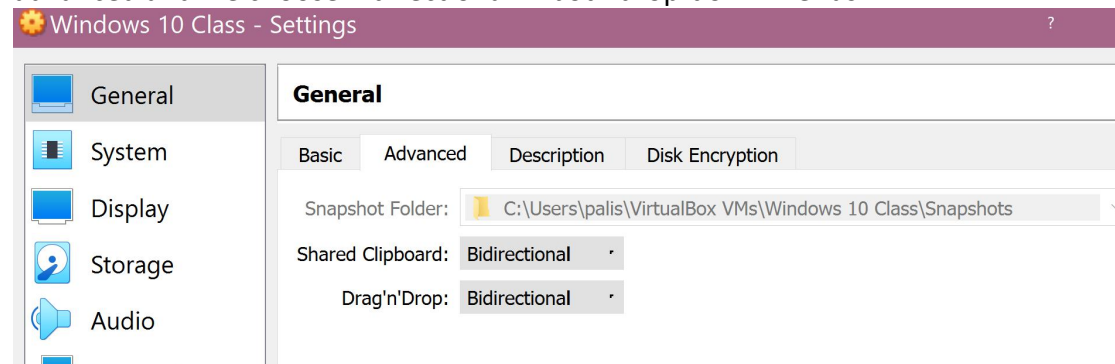

Then we run the machine and complete the installation.
Once installed we need to insert the guest additions cd image in order to be able to use shared folders and more.
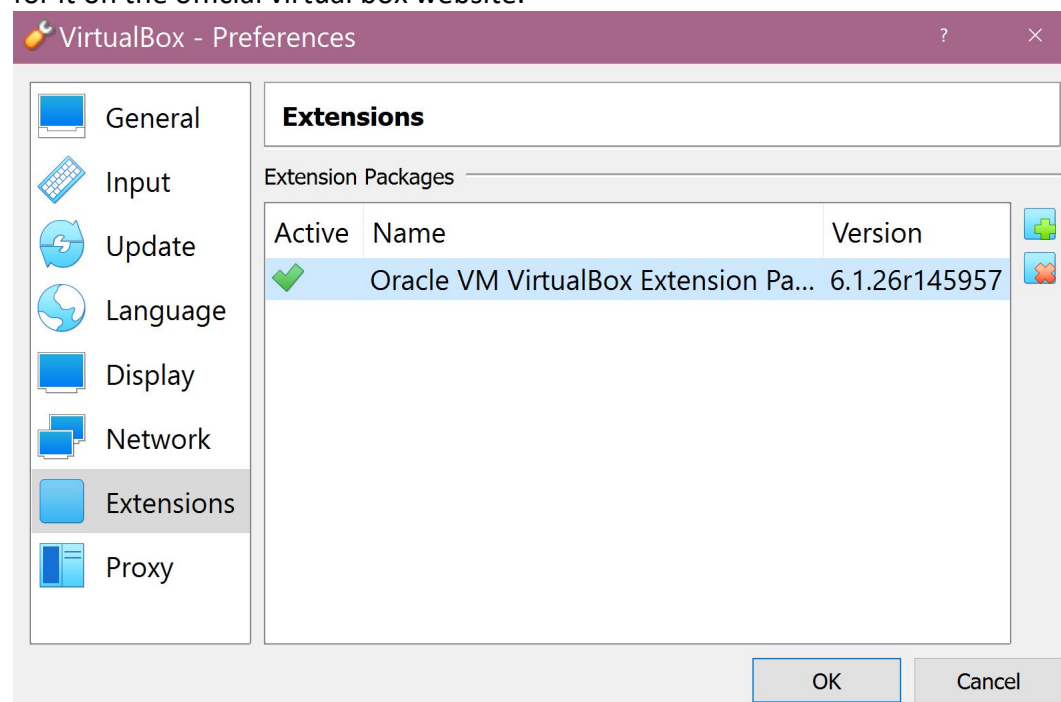

To be able to use the clipboard in both directions we go to settings> general> advanced and we choose Bidirectional in both drop-down menus.

We then choose the folder we want to use, and click on auto-mount.

Finally for the USB 3.0 we need to go to file> preferences> extensions in the virtual box menu and install the corresponding extension pack. (to obtain it we must look for it on the official virtual box website.

We then go to the virtual machine and click settings> USB an click the 3.0 option.

Windows 10 Class - Settings

| General |
| System |
| Display |
| Storage |
| Audio |
| Network |
| Serial Ports |
| USB |

USB

☑ Enable USB Controller

○ USB 1.1 (OHCI) Controller

○ USB 2.0 (OHCI + EHCI) Controller

◉ USB 3.0 (xHCI) Controller
